Note: The M2.5\*4 screws are in the transparent packing bag of the servo.

### 3. Transmission Parts

Servo x5 (Here is the model, the actual picture shall prevail)

GA12-N20 Gear Motor x2

Motor Seat Set x2

S12D3 Coupling Set x2

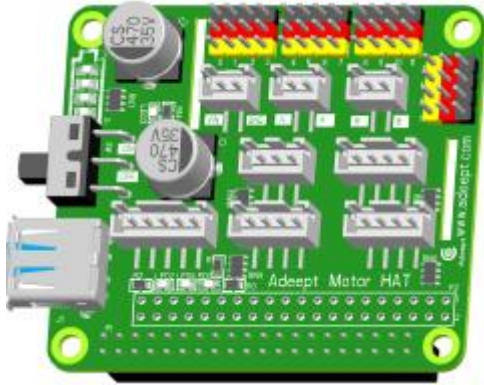

Track x2

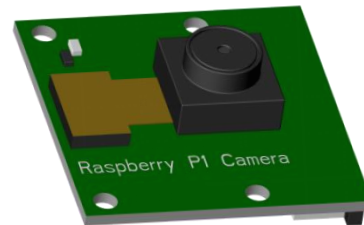

## 4. Electronic Parts

Adeept Motor HAT x1

Raspberry Pi Camera x1

18650 Battery Holder Set x1

Adeept Ultrasonic Module x1

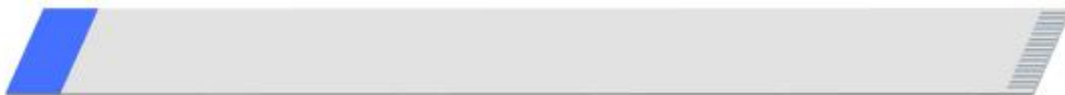

3 Tracking Module x1

WS2812 LED x4

Raspberry Pi Camera Cable(black) x1

3-Pin Wire -A x3

3-Pin Wire -B x1

4-Pin Wire(White) x1

5-Pin Wire(red) x1

Servo Extension Cable x1 (It is used for the most remote servo of the robotic arm, and the length of the cable is long enough.)

**Note:**

1. 18650 batteries, battery chargers are common among our other products, which can avoid repeated purchases to increase your cost.
2. To buy 18650 batteries, battery chargers, please search and purchase in our store in advance.

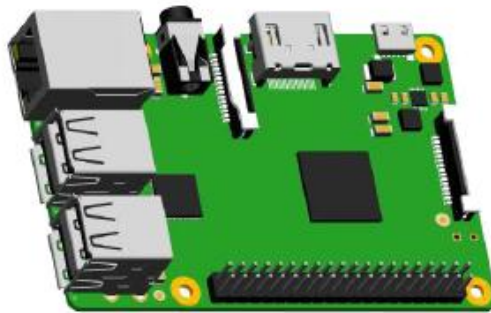

## 5. Tools

|                                                                                                                                  |                                                                                                           |                                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| HexWrench-2.0mm X1<br>                          | Cross Screwdriver X1<br> | Cross Socket Wrench X1<br> |
| Large Cross-head Screwdriver X1<br>            |                                                                                                           |                                                                                                               |
| Winding Pipe X1<br>                          |                                                                                                           |                                                                                                               |
| [The following two tools are only available for products shipped after March 25, 2022]                                           |                                                                                                           |                                                                                                               |
| Harness Tie X4 (Used to organize cables.)<br> |                                                                                                           |                                                                                                               |
| Tweezer X1 (Used to install and remove SD cards from assembled products and aid in the installation of nuts in confined spaces.) |                                                                                                           |                                                                                                               |

## 6. You need to purchase the following components

Raspberry Pi x1

And the corresponding power cable of the Raspberry Pi version.

Raspberry Pi version compatible with the product: 3B , 3B+ , 4B.
